

# Short course

Coordinators: **Stefano Maci (UNISI)** and **Zvonimir Sipus (UNIZAG)**

**UNISI**

S. Maci

**UNIZAG**

Z. Sipus

**Title of the course**

## Advanced Mathematics for Antenna Analysis

**Place**

Hotel Uvala, Dubrovnik, Croatia

**Date:**

**May 09 – May 14, 2016**

**Summary**

The objective of this course is to explain the mathematical methods used in computational antenna analysis and to provide students with mathematical background necessary for advanced antenna engineering and electromagnetic software development. This course can also serve as a mathematical introduction to other ESoA courses. The course will cover different approaches to solving wave equations, various wave representations, and mathematical theorems used to simplify the original electromagnetic problem. In this sense, the aim of this course is to help students gain a deeper understanding of which field representation is suited for a given complex electromagnetic problem.

**Involved institutions**

**Structure of the course**

Lectures	Self study & Assignments	Computer exercise	Total	Credits	Assessment typology
40h	10h	-	50h	3 ECTS	Attendance: 2 cr Assignments: 1 cr

**Teachers**

Name	Organization	Title
S. Maci	UNISI	Prof.
Z. Sipus	UNIZAG	Prof.
A. Freni	UNIFI	Prof.
A. Skrivervik	EPFL	Prof.
G. Vecchi	POLITO	Prof.

**Availability of dedicated structures**

**Grants**

Four grants were provided; one by IDS, Italy, one by CST, Germany, and two by University of Zagreb, Croatia.

<b>Monday: FUNDAMENTAL THEOREMS FRAMED IN THE ANTENNA ANALYSIS</b>		
<b>Z. Sipus</b> (UNIZAG)	9.30-10.00	<ul style="list-style-type: none"> <li>• The European School of Antennas</li> <li>• Introduction to the course</li> </ul>
<b>A. Freni</b> (UNIFI)	10.00-13.00	<b>Fundamental theorems (1)</b> <ul style="list-style-type: none"> <li>• Uniqueness</li> <li>• Energy</li> </ul>
	<b>Lunch and swimming break</b>	
	15.30-19.30	<b>Fundamental theorems (2)</b> <ul style="list-style-type: none"> <li>• Equivalence and induction theorems</li> <li>• Integral equation and Computational Electromagnetics (CEM)</li> <li>• HF approximations for scattering and diffraction</li> <li>• Examples and exercises</li> </ul>

<b>Tuesday: FUNDAMENTAL THEOREMS AND SCALAR AND VECTOR WAVE EQUATION IN ABSENCE OF SOURCES</b>		
<b>A. Freni</b> (UNIFI)	9.00-13.00	<b>Fundamental theorems (3)</b> <ul style="list-style-type: none"> <li>• Reciprocity Theorem</li> <li>• Implication of reciprocity in IE-MoM and application in CEM</li> </ul>
	<b>Lunch and swimming break</b>	
	15.30-17.30	<b>Fundamental theorems</b> <ul style="list-style-type: none"> <li>• Examples and exercises</li> </ul>
<b>Z. Sipus</b> (UNIZAG)	17.30-19.30	<b>Scalar wave equation</b> <ul style="list-style-type: none"> <li>• Introduction to waves</li> <li>• Definition of scalar wave equations; basic properties</li> <li>• Solving scalar wave equation using separation of variables</li> </ul>

<b>Wednesday: SCALAR AND VECTOR WAVE EQUATION IN ABSENCE OF SOURCES AND COMPLEX ANALYSIS</b>		
<b>Z. Sipus</b> (UNIZAG)	9.00-13.00	<b>Scalar wave equation</b> <ul style="list-style-type: none"> <li>• Solving scalar wave equation using separation of variables</li> <li>• Eigenvectors, eigenmodes and completeness relations</li> <li>• Examples and exercises</li> </ul> <b>Vector wave equation</b> <ul style="list-style-type: none"> <li>• Helmholtz' and Deby' potentials</li> <li>• Open and closed domains</li> <li>• Green's identities</li> <li>• Examples and exercises</li> </ul>
	<b>Lunch and swimming break</b>	
	15.30-17.30	<b>Examples, open discussion and exercises</b> <ul style="list-style-type: none"> <li>• Scalar and vector wave equation</li> </ul>
<b>S. Maci</b> (UNISI)	17.30-19.30	<b>Complex analysis fundamentals</b> <ul style="list-style-type: none"> <li>• Complex transformations</li> <li>• Transformation of complex variables</li> </ul>

<b>Thursday: GREEN's FUNCTION</b>		
<b>S. Maci</b> (UNISI)	9.00 13.00	<b>Green's functions</b> <ul style="list-style-type: none"> <li>• Generalities</li> <li>• Scalar and Dyadic GF</li> </ul> Scalar GF representation <ul style="list-style-type: none"> <li>• 1D, 2D and 3D GF for the wave eqs.-</li> </ul> GF in cylindrical spectral coordinates open-domain <ul style="list-style-type: none"> <li>• <math>\rho</math>-Tx line and z-Tx line</li> </ul> GF in closed –domains <ul style="list-style-type: none"> <li>• Waveguides and cavities</li> </ul>
	<b>Lunch and swimming break</b>	
	15.30 19.30	<b>Examples and Exercises:</b> <ul style="list-style-type: none"> <li>• Parallel plate waveguide</li> <li>• Horizontal dipole in stratified media,</li> <li>• Dipoles close to cylindrical multistrates</li> <li>• Dipoles close to a wedge</li> </ul>

<b>Friday: ASYMPTOTIC EVALUATION OF INTEGRALS</b>		
<b>S. Maci</b> (UNISI)	9.00 13.00	<b>Basics of asymptotic evaluation of integrals:</b> <ul style="list-style-type: none"> <li>• Typical integral representation</li> <li>• Saddle points and SDP</li> <li>• Examples and exercises</li> </ul>
	<b>Lunch and swimming break</b>	
	15.30 19.30	<b>Non Uniform and Uniform asymptotics:</b> <ul style="list-style-type: none"> <li>• Saddle-point – pole interaction (wedge problem)</li> <li>• Saddle-point – complex pole (evanescent wave diffraction, slab Green's function)</li> <li>• End-point – saddle-point (PO-diffraction, Shadow boundary diffraction)</li> </ul>

<b>Saturday: PERIODIC STRUCTURES</b>		
<b>G. Vecchi</b> (POLITO)	9.00 13.00	<b>Periodic structures:</b> <ul style="list-style-type: none"> <li>• Floquet Theorem</li> <li>• Green's functions for periodic structures in space domain</li> <li>• Green's functions for periodic structures in spectral domain</li> <li>• Convergence problems</li> </ul>
	<b>Lunch and swimming break</b>	
	15.30 18.30	<b>Periodic structures – advanced topics:</b> <ul style="list-style-type: none"> <li>• Finite period structures and quasi periodic structures</li> <li>• Acceleration of calculation of Green's functions (summation by parts, Shanks' transform, Ewald's transform,...)</li> <li>• Dispersion of Green's functions for periodic structures (dispersion diagrams, bandgaps, EBG structures, metamaterials)</li> </ul>
	18.30 19.30	<b>Final assessment tests</b>
